

Dear Martin,

I just wanted to thank you all for offering such a great product to us at our Augusta Quarry. I am referring to the CleanScrape product you all sell.

Before the installation of the CleanScrape we were losing approximately 1 to 2 tons of material a day and cleanup was costing use about 1 to 2 hours of work. So I got in touch with Rick Barela from Martin and he told me about the clean scrape and what it could do for us. He offered us the free trial of using the CleanScrape and if we didn't like the performance after 60 days we did not have to keep it and they would take it out of service at no charge.

I told Rick that we would like to try it out. So Rick came out and measured our conveyer we were looking to install it on and took his info back to Martin and made us a CleanScrape that would work for our application. He then return to do the installation which went smoothly and we were on our way. After about a week of running Rick came back out and made any adjustments necessary at that time. Within two weeks the CleanScrape was performing better than I thought it would and we decided to keep it.

After the installation of the CleanScrape our material loss was cut to just about nothing and cleanup was a breeze. This scraper was a good investment and we are looking at installing another one on our wash screening belt in the near future.

I would like to thank Rick for his great customer service and Martin for producing a great product.

Sincerely,

Ben Mooney
