Important

MARTIN ENGINEERING HEREBY DISCLAIMS ANY LIABILITY FOR: DAMAGE DUE TO CONTAMINATION OF THE MATERIAL; USER'S FAILURE TO INSPECT, MAINTAIN AND TAKE REASONABLE CARE OF THE EQUIPMENT; INJURIES OR DAMAGE RESULTING FROM USE OR APPLICATION OF THIS PRODUCT CONTRARY TO INSTRUCTIONS AND SPECIFICATIONS CONTAINED HEREIN. MARTIN ENGINEERING'S LIABILITY SHALL BE LIMITED TO REPAIR OR REPLACEMENT OF EQUIPMENT SHOWN TO BE DEFECTIVE.

Observe all safety rules given herein along with owner and Government standards and regulations. Know and understand lockout/tagout procedures as defined by American National Standards Institute (ANSI) ANSI/ASSP z244.1-2024, *The Control of Hazardous Energy Lockout, Tagout And Alternative Methods and Occupational Safety* and Health Administration (OSHA) Federal Register, Title 29 Subtitle B Chapter XVII Subpart J 1910.147, *Control of Hazardous Energy Source (Lockout/Tagout)*; Final Rule.

The following symbols may be used in this manual:

Danger: Immediate hazards that will result in severe personal injury or death.

Warning: Hazards or unsafe practices that could result in personal injury.

Caution: Hazards or unsafe practices that could result in product or property damages.

Important: Instructions that must be followed to ensure proper installation/operation of equipment.

Note: General statements to assist the reader.

Introduction

General

Martin® Thumper™ Series Timed Impactors and PV Series Piston Vibrators provide force to activate the free flow of sticky, coarse, high-moisture materials in bins and hoppers. The vibrators/impactors require no maintenance when used with filtered and lubricated air.

This manual covers installing and operating Martin® Thumper™ Series Timed Impactors and PV Series Piston Vibrators on bins, hoppers, and chutes. For assistance installing the vibrators/impactors for other applications, call Martin Engineering.

Technical data is provided in Appendix A.

Dimensions for each Martin® Thumper™ Series Timed Impactor and PV Series Piston Vibrator are provided in Appendix B.

References

The following documents are referenced in this manual:

- American National Standards Institute ANSI/ASSP Z244.1-2024, *The Control of Hazardous Energy Lockout, Tagout and Alternative Methods* American National Standards Institute, Inc., 1180 6th Ave, 10th Floor New York, NY 10036.
- Federal Register, Title 29 Subtitle B Chapter XVII Subpart J 1910.147, *Control of Hazardous Energy Source (Lockout/Tagout); Final Rule*, Department of Labor, Occupational Safety and Health Administration (OSHA), 32nd Floor, Room 3244, 230 South Dearborn Street, Chicago, IL 60604.

Safety

All safety rules defined in the above documents, and all owner/employer safety rules, must be strictly followed when working on the Martin® Thumper™ Series Timed Impactors and PV Series Piston Vibrators.

Materials required

In addition to standard hand tools, the following materials are required to install this equipment:

- Channel Mount, P/N 29928-XX or equivalent.
- Air Line Kit, P/N 29808 or 29809.

Before Installing Vibrator/Impactor

IMPORTANT

The delivery service is responsible for damage incurred during transportation. Martin Engineering CANNOT enter claims. Contact your transportation agent for more information.

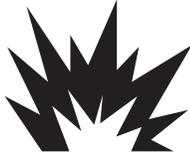

1. Inspect shipping container for damage. If damage has occurred, report damage to delivery service immediately and fill out delivery service's claim form. Keep any damaged goods subject to examination.
2. Remove vibrator/impactor from shipping container.
3. If anything is missing, contact Martin Engineering or a representative.

WARNING

Before installing equipment, turn off and lock out / tag out / block out / test out all energy sources.

4. Before installing equipment, turn off and lock out / tag out / block out / test out all energy sources to mounting structure according to ANSI standards (see "References").

WARNING

Gas level or dust content must be tested before using a cutting torch or welding. Using a cutting torch or welding in an area with gas or dust may cause an explosion.

5. If using a cutting torch or welding, test atmosphere for gas level or dust content. Cover conveyor belt with fire retardant cover.
6. Make sure mounting surface is strong and flat, within 1/16 in. (2 mm) across vibrator/impactor feet. (This will prevent internal stress to vibrator/impactor casting when tightening mount bolts.)
7. Make sure mounting surface and vibrator are clean and free of debris, paint, and oxidation.

Installing Vibrator/Impactor

IMPORTANT

Reading entire section before beginning work.

CAUTION

If installation instructions are not followed, structure and vibrator/impactor can be damaged. Abusing or handling vibrator/impactor carelessly will accelerate wear and shorten its life.

To install the Martin® Thumper™ Series Timed Impactor or PV Series Piston Vibrator, follow the procedures corresponding to the following steps:

1. Determine where to locate the vibrator/impactor on the structure.

IMPORTANT

Piston vibrators/impactors produce linear vibration best applied to wet, sticky material adhering to a structure wall. The purpose is to move the wall back and forth to dislodge the material.

2. Install 1 to 3-ft (305 to 914-mm) channel or beam onto sloped section of bin.
3. Install channel mount or equivalent onto structure or beam reinforcement, as applicable.
4. Mount vibrator/impactor onto structure.
5. Connect lubricated air lines to vibrator/impactor

Locating vibrator/impactor on structure

See Figure 1. Locate vibrator/impactor in lower 1/4 to 1/3 of structure slope length. If second vibrator/impactor is required, mount 180° from first vibrator/impactor and halfway up slope.

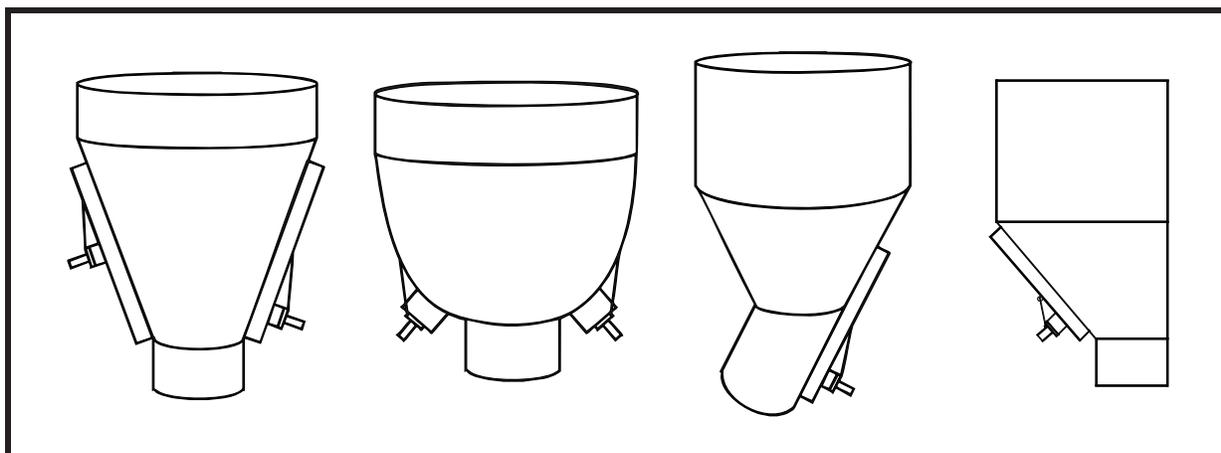

Figure 1. Locating Vibrator/Impactor on Structure

Installing reinforcing beam onto structure

NOTE

This section provides instructions for installing vibrator/impactor on steel structure. To install vibrator/impactor on concrete structure, contact Martin Engineering for instructions.

1. If using customer-supplied mounting plate to mount vibrator/impactor onto structure, do the following:
 - a. Make sure plate is at least the size of vibrator/impactor base.
 - b. Locate plate so that vibrator/impactor can be positioned as shown in Figure 1.
 - c. Weld mounting plate onto structure.
2. See Figure 2. If using Martin® Channel Mount, W-beam Mount (or equivalent), or T-beam to mount vibrator/impactor onto structure, do the following:
 - a. Locate beam so that vibrator/impactor can be positioned as shown in Figure 1.

IMPORTANT

If material is dry, structure wall should be more rigid so a longer channel or beam should be installed. A channel or beam 3/4 the length of the sloped wall is recommended for movement of dry materials.

- b. Install 1 to 3-ft (305 to 914-mm) channel or beam onto structure wall.

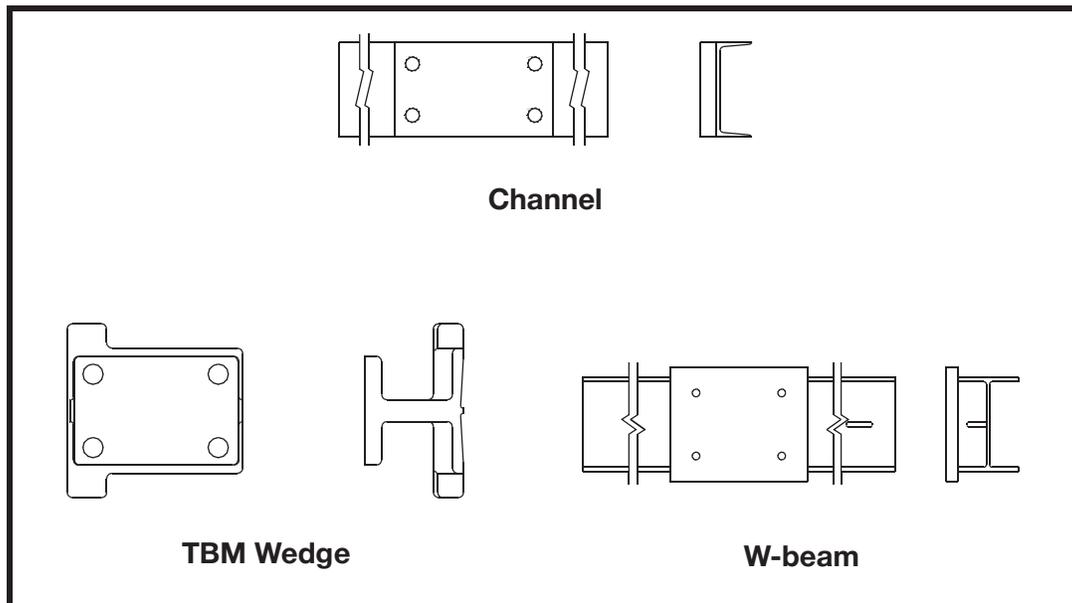

Figure 2. Channel, TBM Wedge, and W-beam Mounts (Top and Side Views)

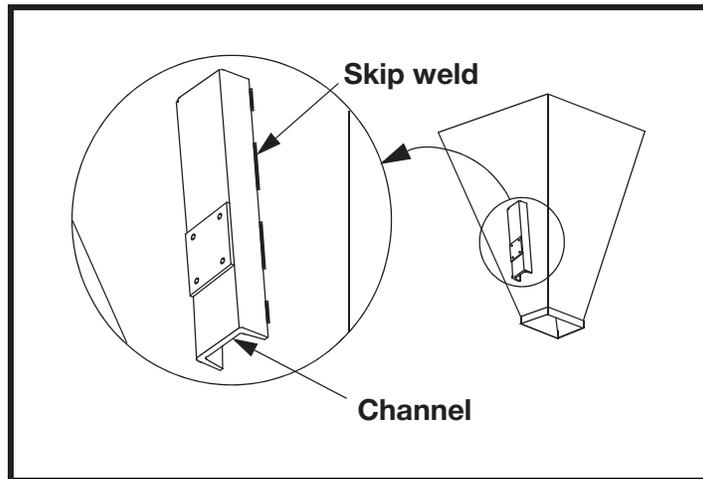

Figure 3. Skip Weld

- c. See Figure 3. Skip-weld beam in place: Weld 3 in. (76 mm), then skip 2 in. (51 mm). Repeat for entire perimeter of beam. Do not weld last 1 in. (25 mm) of either end of beam or any corner.
- d. If installing vibrator/impactor on hopper with wedge mount already in place, use TBM Wedge (see Figure 2) or equivalent to mount vibrator/impactor. Mount female half of wedge rigidly to beam extending at least 3/4 the slope length.

⚠ WARNING

Move vibrator/impactor into final position carefully. Sudden movements could cause strike plate to fall out of vibrator/impactor body causing damage to strike plate or injury to personnel.

IMPORTANT

If vibrator/impactor has been partially disassembled, make sure strike plate is firmly seated before mounting.

Martin® Thumper™ Series Timed Impactor must be mounted with a minimum slope of 15° below horizontal. (See Figure 4.)

*Mounting
vibrator/impactor
onto structure*

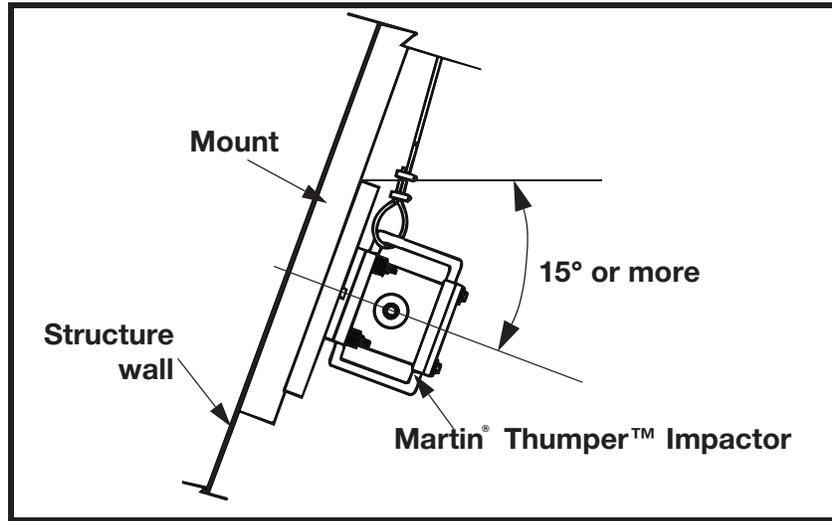

Figure 4. Mounting Martin® Thumper™ Series Timed Impactor

1. If using Martin® Thumper™ Series Timed Impactor, ensure mounting location has a minimum slope of 15° below horizontal. (See Figure 4.)
2. Make sure vibrator/impactor is totally assembled before mounting. If strike plate has come out, press into place making sure o-ring is seated in groove and plate is flush with bottom of vibrator/impactor body.
3. Before installing vibrator/impactor onto mount, apply thread-sealing compound to all bolts.

▲ CAUTION

Use only new bolts, lock nuts, and compression washers to install vibrator/impactor. Old fasteners can break and cause damage to vibrator/impactor or structure.

4. Install vibrator/impactor onto Channel Mount, W-beam Mount, or TBM wedge (see Figure 2) as follows:
 - a. Align mounting holes in vibrator/impactor with mounting holes in mount.
 - b. Install vibrator/impactor onto mount with four new lock nuts, compression washers, and Grade 5 bolts. See Table I for specific size and torque requirements. Use lock nuts and lock washers same size as bolts.

Table I. Bolt Sizes and Torque Specifications

Model Number	Bolt Size	Torque
PV-1.25, T-125	1/2 -13 NC	75 ft-lb (10 kgm)
PV-2, T-200	5/8 -11 NC	170 ft-lb (23 kgm)
PV-3, PV-4, T-250, T-300, T-400	3/4 -10NC	288 ft-lb (38 kgm)

5. To install TBM wedge onto structure, do the following:
 - a. Remove hex nut, flat washer, and slide bracket from threaded rod.
 - b. Slide TBM wedge (with vibrator/impactor attached) into mount on structure.
 - c. Install slide bracket, flat washer, and hex nut onto TBM wedge to secure it in mount.

⚠ WARNING

If vibrator/impactor is mounted more than 6 in. (152 mm) above ground, install cable securing vibrator/impactor to structure. Without cable, vibrator/impactor could fall and cause injury.

1. Secure vibrator/impactor to structure by installing a 1/8-in. (3 mm) diameter cable assembly, P/N 29827, or equivalent as follows:
 - a. Weld D-ring (A, Figure 5) onto structure wall (B) above vibrator/impactor.
 - b. Loop 1/8-in. (3 mm) wire cable (C) through vibrator/impactor handle (D) and D-ring on structure wall.
 - c. Make sure cable is taut and has 3-1/4 in. (83 mm) of turn-back at each end.

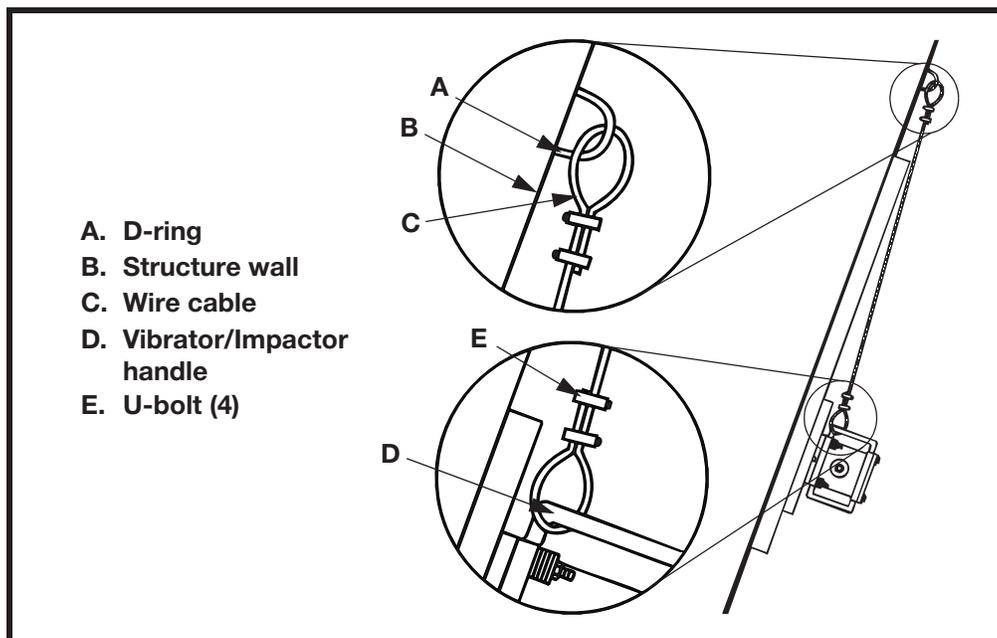

Figure 5. Installing Vibrator/Impactor Safety Cable

- d. Apply thread-sealing compound to threads of nuts on U-bolts (E). Install four cable clamps (two on each end) to secure cable to vibrator/impactor eye and D-ring. Torque nuts to 4.5 ft-lb (0.6 kgm).
- e. Trim loose ends of wire cable.

IMPORTANT

**Connecting
air lines**

At least 20 psi (1.38 bar) is required to operate the Martin® Thumper™ Series Timed Impactors and PV Series Vibrators. Martin Engineering recommends using an air filter (available from Martin Engineering) on the air line.

Lubricated air must be used to ensure proper operation of the vibrator/impactor. Set lubricator to deliver 1–3 drops of oil per minute.

Use Martin® Air Motor Oil or an equivalent, such as spindle oil ISO 22 or SAE No. 10 non-detergent oil.

1. Run a lubricated air line (supplied by the customer) to the intake on the side of the vibrator/impactor body. See Figure 6. Set lubricator to deliver 1–3 drops of oil per minute.
2. Remove plastic plug.
3. Connect air line to vibrator/impactor.

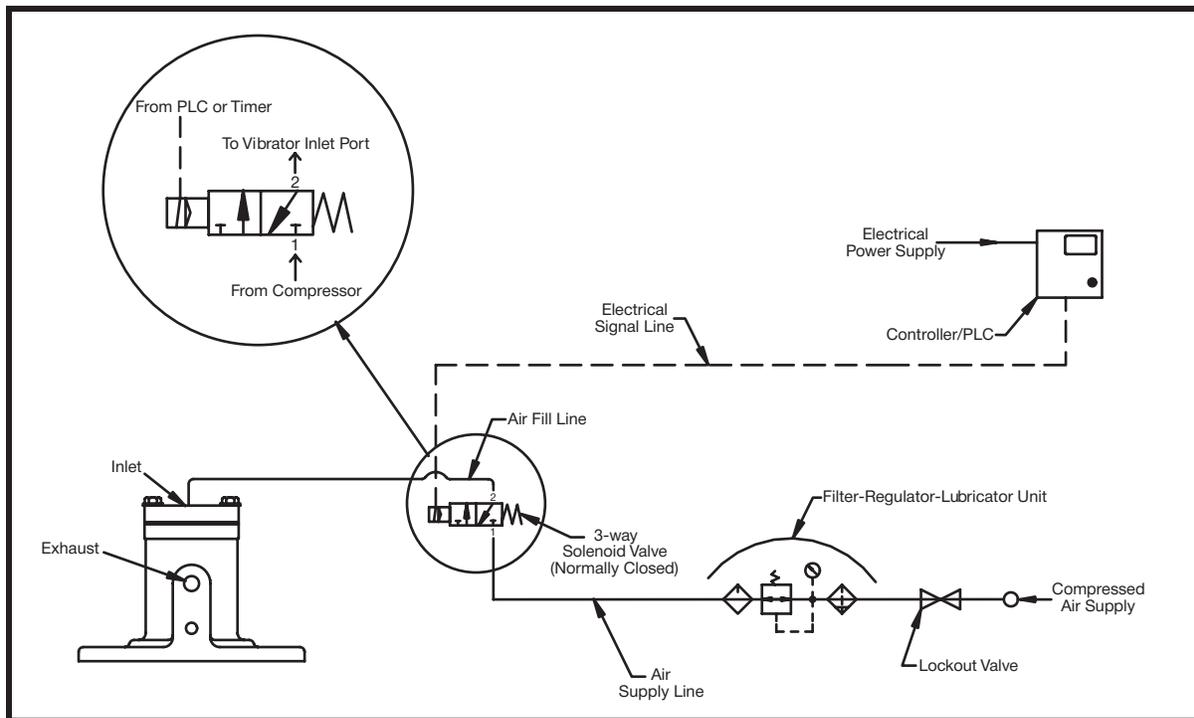

Figure 6. Martin® Thumper™ Series Timed Impactor Plumbing Detail for Normally-Closed Solenoid Valve

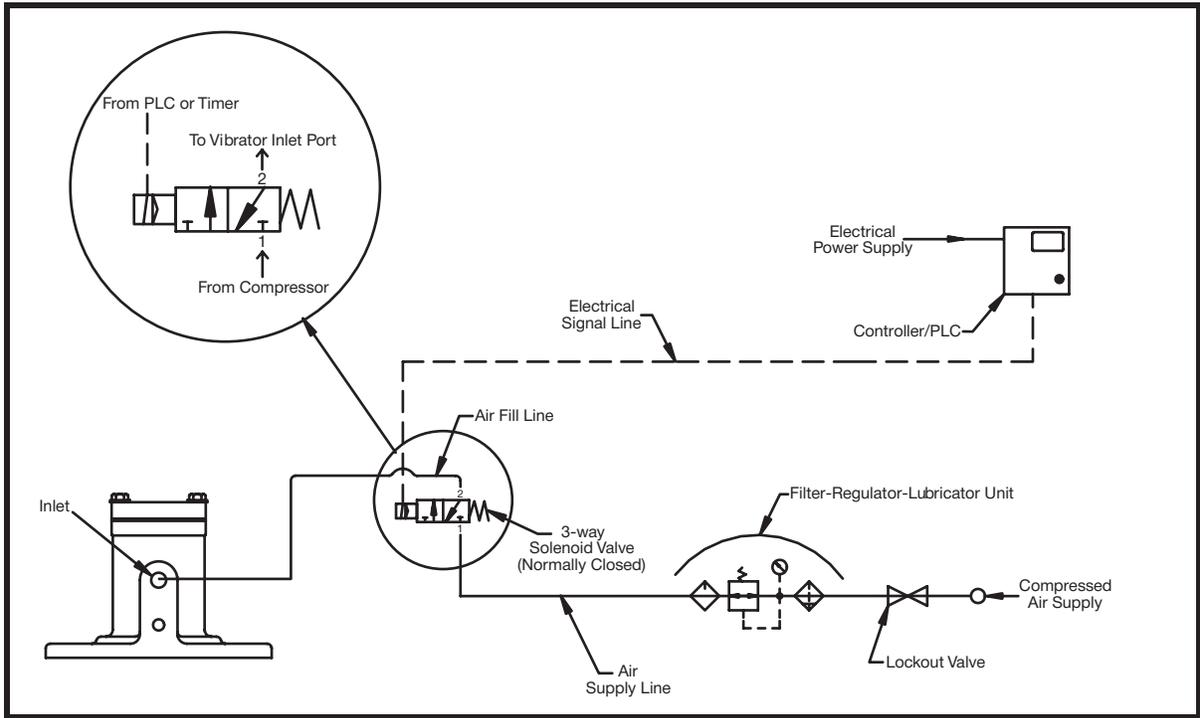

Figure 7. Martin® PV Piston Vibrator Plumbing Detail for Normally-Closed Solenoid Valve

After Installing Vibrator/Impactor

IMPORTANT

Read entire section before beginning work.

1. Start vibrator/impactor.

⚠ WARNING

Piston vibrators/impactors are loud when operating. Use ear protection to avoid impairment or loss of hearing.

2. Observe operation of vibrator/impactor. If there is noticeable movement of the structure wall or mount during operation, add more reinforcement to structure (see “Installing reinforcing beam onto structure”).
3. After 1 hour of operation, tighten mounting bolts while vibrator/impactor is operating to fully seat vibrator/impactor.

Weekly Maintenance

IMPORTANT

Read entire section before beginning work. Allow equipment to cool to ambient temperature before working on it.

1. Check vibrator/impactor mounts for structural damage. If structure wall is beginning to tear or if vibrator/impactor is moving, reinforce wall underneath vibrator/impactor mount (see “Installing reinforcing beam onto structure”).
2. Make sure all fasteners are tight. Tighten if necessary.

⚠ WARNING

Shut off air pressure before disassembling unit. Servicing vibrator/impactor before air pressure is turned off can cause serious injury.

3. If vibrator/impactor is making unusual noise or is not moving material away from hopper wall, disassemble by doing the following:
 - a. Shut off air pressure to unit.
 - b. Loosen mounting bolts but do not remove.
 - c. Slide shims under vibrator/impactor so it is 3/8 to 1/2 in. (9 to 13 mm) away from mount.
 - d. Tighten mounting bolts to the proper torque (see Table I).

⚠ CAUTION

Apply only 10 psi (0.69 bar) air pressure to vibrator/impactor during disassembly. Damage to vibrator/impactor could result if more pressure is used.

- e. Apply 10 psi (0.69 bar) air pressure to vibrator/impactor to dislodge strike plate.
- f. Shut off air supply to vibrator/impactor and remove unit from mount.
- g. Inspect parts for wear (see “Troubleshooting”).

⚠ CAUTION

Use only new Grade 5 bolts, lock nuts, and washers to install vibrator/impactor. Old fasteners can break and cause damage to vibrator/impactor or structure.

4. Reassemble vibrator/impactor. Mount onto structure using new fasteners (see “Mounting vibrator/impactor onto structure”).
5. Wipe all labels clean. If labels are not readable, contact Martin Engineering or representative for replacements.
6. Install safety cable and air line.
7. Restart vibrator/impactor.

Troubleshooting

Troubleshooting

If you are experiencing problems with the Martin® Thumper™ Series Timed Impactor or PV Series Piston Vibrator, see below.

Symptom	Corrective Action
Vibrator/impactor not moving material	<ul style="list-style-type: none"> • Vibrator/impactor assembled incorrectly. Dismantle vibrator/impactor and assemble correctly. • No air pressure. Make sure air is on and reaching vibrator/impactor.
Vibrator/impactor making unusual noise	<ul style="list-style-type: none"> • Vibrator/impactor assembled incorrectly. Dismantle vibrator/impactor and assemble correctly. • Contaminant has entered vibrator/impactor. Disassemble vibrator/impactor and clean body and piston. If piston shows signs of wear, replace piston.
Structure wall moving or beginning to tear	Wall not rigid enough. Reinforce structure wall or mount.

Part Numbers

This section provides product names and corresponding part numbers for Martin® Thumper™ Series Timed Impactors and PV Series Piston Vibrators and related equipment. Please reference part numbers when ordering parts.

Martin® PV Series Piston Vibrators

- Martin® PV 1-1/4 Piston Vibrator Assembly:** P/N 12883. See Figure 8.
- Martin® PV 2 Piston Vibrator Assembly:** P/N 12889. See Figure 9.
- Martin® PV 2 Piston Vibrator Assembly with Sleeve:** P/N 19862.
- Martin® PV 2-1/2 Piston Vibrator:** P/N 18105 See Figure 10.
- Martin® PV 2-1/2 Piston Vibrator Assembly with Sleeve:** P/N 18581. See Figure 11.
- Martin® PV 3 Piston Vibrator Assembly (Wide Base):** P/N 21287. See Figure 12.
- Martin® PV 3 Piston Vibrator Assembly (Wide Base) with Sleeve:** P/N 23990.
- Martin® PV 4 Piston Vibrator Assembly:** P/N 17757. See Figure 13.
- Martin® PV 4 Piston Vibrator Assembly with Sleeve:** P/N 21035.

Martin® Thumper™ Series Timed Impactors

- Martin® Thumper™ T-125 Timed Impactor Assembly:** P/N 21685. See Figure 8.
- Martin® Thumper™ T-200 Timed Impactor Assembly:** P/N 21682. See Figure 9.
- Martin® Thumper™ T-250 Timed Impactor Assembly:** P/N 19078. See Figure 11.
- Martin® Thumper™ T-300 Timed Impactor Assembly:** P/N 21572. See Figure 12.
- Martin® Thumper™ T-400 Timed Impactor Assembly:** P/N 17589. See Figure 13.

Vibrator mounts

- Channel Mount for P-1.25 Series:** P/N 29928-01.
- Channel Mount for P-2 Series:** P/N 29928-02.
- Channel Mount for P-2.5 Series:** P/N 29928-05.
- Channel Mount for P-3 Series (excluding railcar models):** P/N 29928-05.
- P-3R TBM Wedge Bracket (for railcar models [finished]):** P/N 30048.

Mounting Kits

- Mounting Kit for P-1.25 Series:** P/N 29810.
- Mounting Kit for P-2 Series:** P/N 29811.
- Mounting Kit for P-2.5 Series:** P/N 39604.
- Mounting Kit for P-3 Series (including railcar models):** P/N 39604.

Miscellaneous

- Martin® Controller - single circuit:** P/N 38902-20.
- Martin® Air Control Kit:** P/N 39504. See Figure 14.
- Martin® Air Motor Oil:** P/N 14766 (qt) or 14767 (case).

Problem Solved™ ***GUARANTEED!***

For nearly 30 years, Martin Engineering's Foundations™ Books have taught industry personnel to operate and maintain clean and safe belt conveyors. The Foundations™ Book, fourth edition, focuses on improving belt conveyors by controlling fugitive material. "The Practical Resource for Total Dust and Material Control," is a 576-page hard cover volume that provides information of value to industries where the efficient handling of bulk materials is a key to productivity and profitability.

Expanding upon the book, our Foundations™ Training Program addresses the design and development of more productive belt conveyors, and is offered in three customizable seminars. Attendees gain a better understanding of conveyor safety and performance, helping to justify upgrade investments and increase profitability.
