Mr. Florin-Mugurel Petcu

We have installed a new cleaning system (Clean Scrape belt cleaning system with Type S - TU 02) in our primary belt conveyor Omya Arboç (Spain). This tape transports calcium carbonate stones with a size of 0-90 mm. We have installed the cleaning system in June 2016, with the technical support of Martin Engineeing Company. Often the transported material has moisture and adheres to the band. Since installing the new cleaning system, the rubber belt is cleaned properly and the system is operating efficiently, no matter the weather. The Cleanscrape system guarantees uniform pressure across the belt surface and does not require constant adjustment to ensure optimum cleaning efficiency.

Best regards

Jordi Carrasco

Mechanical manager
