Replacement Blades

FOR PRIMARY BELT CLEANERS

Clean Better
Last Longer
COST LESS

GUARANTEED!

100% money back guarantee

Blades for all models and manufacturers including:

- **Argonics™**
- **ASGCO®**
- **Flexco®**
- **ARCH**
- **Superior®**
- **American Eagle**
- **BENETECH®**

Martin® Replacement Blades

FOR PRIMARY BELT CLEANERS

Martin® High-Performance Urethane

Urethane	Color	Part Number Suffix	Durometer	Application Conditions	Temperature Range
Standard	Orange		85	Suitable for most applications, including abrasive conditions and exposure to solvents or oil. For use with materials such as coal, ore, bauxite, coke, refuse. Suitable for 80% or more of all applications.	-20° to 160°F (-30° to 70°C)
High Temperature	Green	GR	95	For use with high temperature materials such as clinker.	Continuous -40° to 300°F (-40° to 150°C) Intermittent 350°F (177°C)
Chemical Resistant	Brown	BR	90	Improved resistance to chemicals and reduces water absorption for high moisture environments such as limestone. Best choice for applications exposed to chemicals with pH as high as 11 and as low as 4.	-40° to 160°F (-40° to 70°C)
Low Rigidity	Tan	CL	86	For use with dry products such as sand and gravel. w	-20° to 160°F (-30° to 70°C)
Low Adhesion	Navy Blue	NB	90	For use with sticky or tacky products such as cement, glass, and wood chips.	-20° to 160°F (-30° to 70°C)

Martin® Urethane Blade Benefits:

- Manufactured in house for highest quality assurance
- Specially-formulated, color-coded urethane to suit any application
- Up to 54% more urethane in the wearable area than competitive blades
- High-performance urethane ensures product satisfaction
- Backed by our Absolutely, No Excuses Guarantee

**Clean Better
Last Longer
COST LESS
GUARANTEED!**

100% money back guarantee

We guarantee that our blades will fit and will **clean better, last longer, and cost less** than competitive blades.

Blade Design

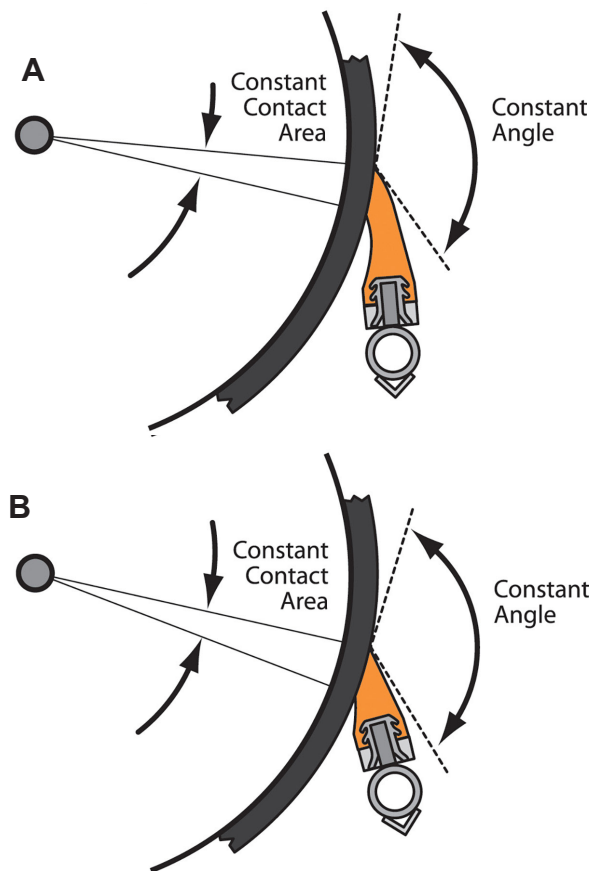

BLADE PROFILE

Wear volume and attack angle contribute much more to blade life and cleaning performance than blade height.

CONSTANT ANGLE/AREA RADIAL PRESSURE (CARP) CLEANING

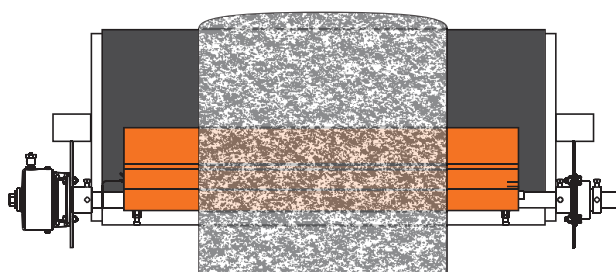

(A) To ensure consistent cleaning throughout all stages of blade life, our patented Constant Angle Radial Pressure ("CARP") technology incorporates a specially-designed curved blade. This constant angle design maintains efficiency throughout the service life of the blade.

(B) To prevent a reduction in blade-to-belt pressure, cleaner efficiency, and the constant need for retensioning, we combined our Constant Area Radial Pressure design ("CARP") with our tensioner technology to minimize the change in area throughout a blade's wear life.

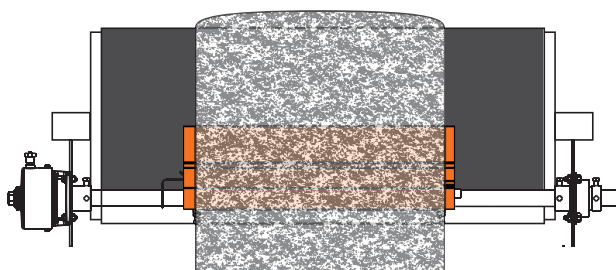

Material Path

For optimal cleaning and blade life, the blade width should be sized as close to the material path as possible.

INCORRECT

CORRECT

**Clean Better
Last Longer
COST LESS
GUARANTEED!**

100% money back guarantee

We guarantee that our blades will fit and will **clean better, last longer, and cost less** than competitive blades.

PRECLEANER BLADE TROUBLESHOOTING GUIDE

Problem	Cause	Solution
Uneven Blade Wear - blade worn more in center than at ends	Incorrect blade length	Select blade width based on material path.
Rapid Blade Wear	Incorrect cleaner and/or blade	Select proper belt cleaner and blade based on belt width, belt speed, and head pulley diameter.
	Incorrect tension	Adjust tensioner according to applicable belt cleaner and/or tensioner operator's manual.
	Incorrect mounting	Verify correct mounting location according to applicable belt cleaner operator's manual.
Blade Flipping Through	Incorrect cleaner and/or blade	Select proper belt cleaner and blade based on belt width, belt speed, and head pulley diameter to ensure blade angle of attack is correct.
	Incorrect mounting	Verify correct mounting location according to applicable belt cleaner operator's manual.
	Incorrect tension (too low)	Adjust tensioner according to applicable belt cleaner and/or tensioner operator's manual.
Blade Chattering or Skipping on Belt	Belt is dry	Select proper urethane for dry material, such as Martin® Clear (CL) urethane.
Blade Urethane Melting	Belt is dry, friction causes heat to build up in blade	Select proper urethane for dry material, such as Martin® Clear (CL) urethane.
	Material being conveyed is exceeding temperature range of urethane	Select proper urethane for high temperature material, such as Martin® High-Temp (GR) urethane.
